# **ABOUT THIS MANUAL**

### Purpose

This manual describes the assembly, installation, operation and troubleshooting of this unit. Please read this manual carefully before installations and operations. Keep this manual for future reference.

#### Scope

This manual provides safety and installation guidelines as well as information on tools and wiring.

# SAFETY INSTRUCTIONS

# WARNING: This chapter contains important safety and operating instructions. Read and keep this manual for future reference.

- 1. Before using the unit, read all instructions and cautionary markings on the unit, the batteries and all appropriate sections of this manual.
- 2. **CAUTION** --To reduce risk of injury, charge only deep-cycle lead acid type rechargeable batteries. Other types of batteries may burst, causing personal injury and damage.
- 3. Do not disassemble the unit. Take it to a qualified service center when service or repair is required. Incorrect re-assembly may result in a risk of electric shock or fire.
- 4. To reduce risk of electric shock, disconnect all wirings before attempting any maintenance or cleaning. Turning off the unit will not reduce this risk.
- 5. **CAUTION** Only qualified personnel can install this device with battery.
- 6. **NEVER** charge a frozen battery.
- 7. For optimum operation of this inverter/charger, please follow required spec to select appropriate cable size. It's very important to correctly operate this inverter/charger.
- 8. Be very cautious when working with metal tools on or around batteries. A potential risk exists to drop a tool to spark or short circuit batteries or other electrical parts and could cause an explosion.
- 9. Please strictly follow installation procedure when you want to disconnect AC or DC terminals. Please refer to INSTALLATION section of this manual for the details.
- 10. Fuses are provided as over-current protection for the battery supply.
- 11. GROUNDING INSTRUCTIONS -This inverter/charger should be connected to a permanent grounded wiring system. Be sure to comply with local requirements and regulation to install this inverter.
- 12. NEVER cause AC output and DC input short circuited. Do NOT connect to the mains when DC input short circuits.
- 13. **Warning!!** Only qualified service persons are able to service this device. If errors still persist after following troubleshooting table, please send this inverter/charger back to local dealer or service center for maintenance.

# INTRODUCTION

This is a multi-function inverter/charger, combining functions of inverter, MPPT solar charger and battery charger to offer uninterruptible power support with portable size. Its comprehensive LCD display offers user-configurable and easy-accessible button operation such as battery charging current, AC/solar charger priority, and acceptable input voltage based on different applications.

### Features

- Pure sine wave inverter
- Built-in MPPT solar charge controller
- Configurable input voltage range for home appliances and personal computers via LCD setting
- Configurable battery charging current based on applications via LCD setting
- Configurable AC/Solar Charger priority via LCD setting
- Compatible to mains voltage or generator power
- Auto restart while AC is recovering
- Overload/ Over temperature/ short circuit protection
- Smart battery charger design for optimized battery performance
- Cold start function
- Zero-transfer Time

### **Basic System Architecture**

The following illustration shows basic application for this inverter/charger. It also includes following devices to have a complete running system:

- Generator or Utility.
- PV modules

Consult with your system integrator for other possible system architectures depending on your requirements. This inverter can power all kinds of appliances in home or office environment, including motor-type appliances such as tube light, fan, refrigerator and air conditioner.

Figure 1 Hybrid Power System

#### **Product Overview**

- 1. LCD display
- 2. Status indicator
- 3. Charging indicator
- 4. Fault indicator
- 5. Function keys (Please refer to operation chapter for the detailed operation)
- 6. Power on/off switch
- 7. AC input
- 8. AC output
- 9. PV input
- 10. Battery input
- 11. Circuit breaker
- 12. Remote LCD panel communication port
- 13. Parallel communication cable (only for parallel model)
- 14. Current sharing cable (only for parallel model)
- 15. Dry contact
- 16. RS-232 communication port
- 17. Reserved for future use

**NOTE:** For parallel model installation and operation, please check separate parallel installation guide for the details.

# INSTALLATION

### **Unpacking and Inspection**

Before installation, please inspect the unit. Be sure that nothing inside the package is damaged. You should have received the following items inside of package:

- The unit x 1
- User manual x 1
- Communication cable x 1
- Software CD x 1

### Preparation

Before connecting all wirings, please take off bottom cover by removing two screws as shown below.

### **Mounting the Unit**

Consider the following points before selecting where to install:

- Do not mount the inverter on flammable construction materials.
- Mount on a solid surface
- Install this inverter at eye level in order to allow the LCD display to be read at all times.
- The ambient temperature should be between 0°C and 55°C to ensure optimal operation.
- The recommended installation position is to be adhered to the wall vertically.
- Be sure to keep other objects and surfaces as shown in the right diagram to guarantee sufficient heat dissipation and to have enough space for removing wires.

SUITABLE FOR MOUNTING ON CONCRETE OR OTHER NON-COMBUSTIBLE SURFACE ONLY.

Install the unit by screwing three screws. It's recommended to use M4 or M5 screws.

### **Battery Connection**

**CAUTION:** For safety operation and regulation compliance, it's requested to install a separate DC over-current protector or disconnect device between battery and inverter. It may not be requested to have a disconnect device in some applications, however, it's still requested to have over-current protection installed. Please refer to typical amperage in below table as required fuse or breaker size.

#### **Ring terminal:**

0

WARNING! All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for battery connection. To reduce risk of injury, please use the proper recommended cable and terminal size as below.

| $\langle Q \rangle$ |           |
|---------------------|-----------|
| h                   | ا<br>۲۰۱۱ |
| ίĻĻ                 |           |

| Model | Typical    | Battery    | Wire Size         | Ring Terminal   |        | Torque |         |        |
|-------|------------|------------|-------------------|-----------------|--------|--------|---------|--------|
|       | Amperage   | Capacity   |                   | Cable           | Dime   | nsions | Value   |        |
|       |            |            |                   | mm <sup>2</sup> | D (mm) | L (mm) |         |        |
|       | 2004       | 200411     | 1*1/0AWG          | 60              | 6.4    | 49.7   | 2 .2 Nm |        |
| 3KW   | 200A 200AH | 200A 20    | 200A 200AN 2*4AWG | 200AH           | 44     | 6.4    | 49.7    | 2~3 Nm |
|       | 2004       | 200411     | 1*1/0AWG          | 60              | 6.4    | 49.7   | 2 .2 Nm |        |
| 5KW   | 200A       | 200A 200AH |                   | 44              | 6.4    | 49.7   | 2~3 Nm  |        |

#### **Recommended battery cable and terminal size:**

Please follow below steps to implement battery connection:

- 1. Assemble battery ring terminal based on recommended battery cable and terminal size.
- 2. Connect all battery packs as units requires. It's suggested to connect at least 200Ah capacity battery for 3KW model and at least 200Ah capacity battery for 5KW model.
- 3. Insert the ring terminal of battery cable flatly into battery connector of inverter and make sure the bolts are tightened with torque of 2-3 Nm. Make sure polarity at both the battery and the inverter/charge is correctly connected and ring terminals are tightly screwed to the battery terminals.

#### WARNING: Shock Hazard

Installation must be performed with care due to high battery voltage in series.

**CAUTION!!** Do not place anything between the flat part of the inverter terminal and the ring terminal. Otherwise, overheating may occur.

**CAUTION!!** Do not apply anti-oxidant substance on the terminals before terminals are connected tightly.

**CAUTION!!** Before making the final DC connection or closing DC breaker/disconnector, be sure positive (+) must be connected to positive (+) and negative (-) must be connected to negative (-).

### AC Input/Output Connection

**CAUTION!!** Before connecting to AC input power source, please install a **separate** AC breaker between inverter and AC input power source. This will ensure the inverter can be securely disconnected during maintenance and fully protected from over current of AC input. The recommended spec of AC breaker is 30A for 3KW, 50A for 5KW.

**CAUTION!!** There are two terminal blocks with "IN" and "OUT" markings. Please do NOT mis-connect input and output connectors.

**WARNING!** All wiring must be performed by a qualified personnel.

**WARNING!** It's very important for system safety and efficient operation to use appropriate cable for AC input connection. To reduce risk of injury, please use the proper recommended cable size as below.

#### Suggested cable requirement for AC wires

| Model | Gauge  | Torque Value |
|-------|--------|--------------|
| 3KW   | 10 AWG | 1.2~ 1.6 Nm  |
| 5KW   | 8 AWG  | 1.4~ 1.6Nm   |

Please follow below steps to implement AC input/output connection:

- 1. Before making AC input/output connection, be sure to open DC protector or disconnector first.
- 2. Remove insulation sleeve 10mm for six conductors. And shorten phase L and neutral conductor N 3 mm.
- Insert AC input wires according to polarities indicated on terminal block and tighten the terminal screws. Be sure to connect PE protective conductor (
   first.

(⇒→Ground (yellow-green)

 $L \rightarrow LINE$  (brown or black)

N→Neutral (blue)

#### WARNING:

Be sure that AC power source is disconnected before attempting to hardwire it to the unit.

4. Then, insert AC output wires according to polarities indicated on terminal block and tighten terminal screws. Be sure to connect PE protective conductor () first.

#### ⊖→Ground (yellow-green)

L→LINE (brown or black)

#### N→Neutral (blue)

5. Make sure the wires are securely connected.

#### **CAUTION: Important**

Be sure to connect AC wires with correct polarity. If L and N wires are connected reversely, it may cause utility short-circuited when these inverters are worked in parallel operation.

**CAUTION:** Appliances such as air conditioner are required at least 2~3 minutes to restart because it's required to have enough time to balance refrigerant gas inside of circuits. If a power shortage occurs and recovers in a short time, it will cause damage to your connected appliances. To prevent this kind of damage, please check manufacturer of air conditioner if it's equipped with time-delay function before installation. Otherwise, this inverter/charger will trig overload fault and cut off output to protect your appliance but sometimes it still causes internal damage to the air conditioner.

### **PV** Connection

**CAUTION:** Before connecting to PV modules, please install **separately** a DC circuit breaker between inverter and PV modules.

**WARNING!** All wiring must be performed by a qualified personnel. **WARNING!** It'' very important for system safety and efficient operation to use appropriate cable for PV module connection. To reduce risk of injury, please use the proper recommended cable size as below.

| Model | Typical Amperage | Cable Size | Torque     |
|-------|------------------|------------|------------|
| 3KW   | 60A              | 6 AWG      | 1 21 6 Nm  |
| 5KW   | 80A              | 6 AWG      | 1.2~1.6 Nm |

#### **PV Module Selection:**

When selecting proper PV modules, please be sure to consider below parameters:

- 1. Open circuit Voltage (Voc) of PV modules not exceeds max. PV array open circuit voltage of inverter.
- 2. Open circuit Voltage (Voc) of PV modules should be higher than min. battery voltage.

| Solar Charging Mode                |           |           |  |  |  |
|------------------------------------|-----------|-----------|--|--|--|
| INVERTER MODEL 3KW 5KW             |           |           |  |  |  |
| Max. PV Array Open Circuit Voltage | 145Vdc    |           |  |  |  |
| PV Array MPPT Voltage Range        | 30~115Vdc | 60~115Vdc |  |  |  |

Please follow below steps to implement PV module connection:

Remove insulation sleeve 10 mm for positive and negative conductors.
 Check correct polarity of connection cable from PV modules and PV input connectors. Then, connect positive pole (+) of connection cable to positive pole (+) of PV input connector. Connect negative pole (-) of connection cable to negative pole (-) of PV input connector.

3. Make sure the wires are securely connected.

### **Final Assembly**

After connecting all wirings, please put bottom cover back by screwing two screws as shown on the right chart.

### **Remote Display Panel Installation**

The LCD panel can be removable and installed in a remote site with an optional communication cable. Please follow below steps to implement this remote panel installation.

**Step 1.** Loosen the screw on the two sides of bottom case and push up the case cover. Then, remove screw on the top of the display panel. Now, the display can be removed from the bottom case. Then, pull out the cable from the remote communication port.

**Step 2.** Drill two holes in the marked locations with two screws as shown below chart. Place the panel on the surface and align the mounting holes with the two screws. Then, use one more screw on the top to fix the panel to the wall and check if the remote panel is firmly secured.

Step 3. Connect LCD panel to the inverter with an optional RJ45 communication cable as below chart.

### **Communication Connection**

#### Serial Connection

Please use supplied communication cable to connect to inverter and PC. Insert bundled CD into a computer and follow on-screen instruction to install the monitoring software. For the detailed software operation, please check user manual of software inside of CD.

#### **Bluetooth Connection**

This series is built in Bluetooth technology. You may simply go to google play to install "WatchPower". It allows wireless communication up to 6~7m in an open space.

### **Dry Contact Signal**

There is one dry contact (3A/250VAC) available on the rear panel. It could be used to deliver signal to external device when battery voltage reaches warning level.

| Unit Status | Condition                   |  |  | Dry contact port: |        |
|-------------|-----------------------------|--|--|-------------------|--------|
|             |                             |  |  | NC & C            | NO & C |
| Power Off   | Unit is off an              | d no output is                                   | powered.   | Close             | Open   |

| Deven       | from<br>Battery<br>power or | (utility first)                                  | Battery voltage > Setting value in<br>Program 13 or battery charging<br>reaches floating stage | Close             | Open   |
| Power On    | Solar<br>energy.            | Program 01<br>is set as                          | Battery voltage < Setting value in<br>Program 12   | Open              | Close  |
|             |                             | SBU (SBU<br>priority) or<br>SUB (solar<br>first) | Battery voltage > Setting value in<br>Program 13 or battery charging<br>reaches floating stage | Close             | Open   |

## **OPERATION**

### **Power ON/OFF**

Once the unit has been properly installed and the batteries are connected well, simply press On/Off switch (located on the button of the case) to turn on the unit.

### **Operation and Display Panel**

The operation and display panel, shown in below chart, is on the front panel of the inverter. It includes three indicators, four function keys and a LCD display, indicating the operating status and input/output power information.

#### Indicators

| LED In     | dicator                          | Color    | Solid/Flashing           | Messages                                      |

| 02              | Over temperature                   | None                          | <b>85</b>     |
| 03              | Battery is over-charged            | Beep once every second        | []]@          |
| 04              | Low battery                        | Beep once every second        | []Ч@          |
| 07              | Overload                           | Beep once every 0.5 second    |               |
| 10              | Output power derating              | Beep twice every 3 seconds    | ]@            |
| 32              | Communication interrupted          | None                          | 32@           |
| 69              | Battery equalization               | None                          | 29 <b>@</b>   |
| 68              | Battery is not connected           | None                          | Ъ₽ <u>@</u>   |

### **Battery Equalization**

Equalization function is added into charge controller. It reverses the buildup of negative chemical effects like stratification, a condition where acid concentration is greater at the bottom of the battery than at the top. Equalization also helps to remove sulfate crystals that might have built up on the plates. If left unchecked, this condition, called sulfation, will reduce the overall capacity of the battery. Therefore, it's recommended to equalize battery periodically.

#### • How to Apply Equalization Function

You must enable battery equalization function in monitoring LCD setting program 33 first. Then, you may apply this function in device by either one of following methods:

- 1. Setting equalization interval in program 37.
- 2. Active equalization immediately in program 39.

#### • When to Equalize

In float stage, when the setting equalization interval (battery equalization cycle) is arrived, or equalization is active immediately, the controller will start to enter Equalize stage.

#### • Equalize charging time and timeout

In Equalize stage, the controller will supply power to charge battery as much as possible until battery voltage raises to battery equalization voltage. Then, constant-voltage regulation is applied to maintain battery voltage at the battery equalization voltage. The battery will remain in the Equalize stage until setting battery equalized time is arrived.

However, in Equalize stage, when battery equalized time is expired and battery voltage doesn't rise to battery equalization voltage point, the charge controller will extend the battery equalized time until battery voltage achieves battery equalization voltage. If battery voltage is still lower than battery equalization voltage when battery equalized timeout setting is over, the charge controller will stop equalization and return to float stage.

# SPECIFICATIONS

Table 1 Line Mode Specifications

| INVERTER MODEL                  | ЗКѠ   | 5КW    |
|---------------------------------|---|--------|

# **TROUBLE SHOOTING**

| Problem  | LCD/LED/Buzzer   | Explanation / Possible cause   | What to do   |
|--|--|--|--|
| Unit shuts down<br>automatically<br>during startup<br>process.                         | LCD/LEDs and buzzer<br>will be active for 3<br>seconds and then<br>complete off. |  | <ol> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>   |
| No response after power on.  | No indication.   | <ol> <li>The battery voltage is far too<br/>low. (&lt;1.4V/Cell)</li> <li>Battery polarity is connected<br/>reversed.</li> </ol> | <ol> <li>Check if batteries and the<br/>wiring are connected well.</li> <li>Re-charge battery.</li> <li>Replace battery.</li> </ol>  |
|  | Input voltage is<br>displayed as 0 on the<br>LCD and green LED is<br>flashing.   | Input protector is tripped   | Check if AC breaker is tripped<br>and AC wiring is connected<br>well.  |
| Mains exist but the<br>unit works in<br>battery mode.                                  | Green LED is flashing.   | Insufficient quality of AC power.<br>(Shore or Generator)  | <ol> <li>Check if AC wires are too<br/>thin and/or too long.</li> <li>Check if generator (if<br/>applied) is working well or if<br/>input voltage range setting is<br/>correct. (UPS→Appliance)</li> </ol> |
|  | Green LED is flashing.   | Set "Solar First" as the priority of output source.  | Change output source priority to Utility first.  |
| When the unit is<br>turned on, internal<br>relay is switched on<br>and off repeatedly. | LCD display and LEDs are flashing  | Battery is disconnected.   | Check if battery wires are connected well.   |
|  | Fault code 07  | Overload error. The inverter is overload 110% and time is up.  | Reduce the connected load by switching off some equipment.   |
|  | Fault code 05  | Output short circuited.  | Check if wiring is connected well and remove abnormal load.  |
|  | Fault code 02  | Internal temperature of inverter component is over 100°C.  | Check whether the air flow of<br>the unit is blocked or whether<br>the ambient temperature is<br>too high.   |
|  |  | Battery is over-charged.   | Return to repair center.   |
| Buzzer beeps   | Fault code 03  | The battery voltage is too high.   | Check if spec and quantity of<br>batteries are meet<br>requirements.   |
| continuously and<br>red LED is on.   | Fault code 01  | Fan fault  | Replace the fan.   |
|  | Fault code 06/58   | Output abnormal (Inverter voltage<br>below than 190Vac or is higher<br>than 260Vac)  | <ol> <li>Reduce the connected<br/>load.</li> <li>Return to repair center</li> </ol>  |
|  | Fault code<br>08/09/53/57  | Internal components failed.  | Return to repair center.   |
|  | Fault code 50  | PFC over current or surge.   |  |
|  | Fault code 51  |  |  |
|  | Fault code 52  |  |  |
|  | Fault code 55  | Output voltage is unbalanced.  |  |
|  | Fault code 56  | Battery is not connected well or fuse is burnt.  | If the battery is connected well, please return to repair center.  |

| Model | Load (VA) | Backup Time @ 48Vdc 200Ah (min) | Backup Time @ 48Vdc 400Ah (min) |
|-------|-----------|---------------------------------|---------------------------------|
| 5KW   | 500       | 1226                            | 2576                            |
|       | 1000      | 536                             | 1226                            |
|       | 1500      | 316                             | 804                             |
|       | 2000      | 222                             | 542                             |
|       | 2500      | 180                             | 430                             |
|       | 3000      | 152                             | 364                             |
|       | 3500      | 130                             | 282                             |
|       | 4000      | 100                             | 224                             |
|       | 4500      | 88                              | 200                             |
|       | 5000      | 80                              | 180                             |

**Note:** Backup time depends on the quality of the battery, age of battery and type of battery.

Specifications of batteries may vary depending on different manufacturers.
